Jacob G, Israel

פתאום באמצע החיים הודיעו לי שחליתי בסרטן. בבלוטת הערמונית שלי שהיא המקור ליצירת חיים ולהתחדשות, התגלה גידול ממאיר. מעבר להלם הראשוני ולחרדה הקיומית התברר לי שאני שוקע במערכת מפותלת ומורכבת של אפשרויות לטיפול ולריפוי. החל ממעקב ללא התערבות, דרך תהליכי הקרנות פנימיים וחימוניים ועד לניתוחים מגוונים לכריתת הערמונית. להפתעתי גיליתי [more..](#)

G. A., New York, USA

"Just yesterday I got the results of my one month post surgery blood test, the PSA level is less than 0.1, thank you Dr. Samadi!"

[more..](#)

M. H., MD, Pennsylvania, USA

"...My choice of Dr. Samadi for the robotic surgery was without any doubt the best choice giving me the best outcome for this problem".

[more..](#)

**Prostate Cancer Treatment
and Robotic Surgery Expert**

David B. Samadi, MD

**Chairman of Urology,
Chief of Robotic Surgery at Lenox Hill Hospital
Professor of Urology at Hofstra North Shore-LIJ
School of Medicine**

Performed over **6,000** successful robotic prostate surgeries
Developed his own advanced SMART prostate cancer surgery technique
Personalized care before and after the procedure

NY robotic prostate surgeon, David B. Samadi, MD, is the Chairman of Urology, Chief of Robotic Surgery at Lenox Hill Hospital, and Professor of Urology at Hofstra North Shore-LIJ School of Medicine in New York City. He is one of the very few urologic surgeons in the United States trained in oncology, open, laparoscopic, and robotic surgery - as such, many regard him as the best prostate surgeon.

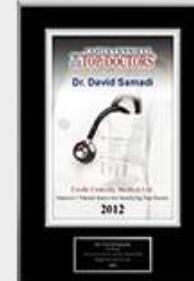

Dr. Samadi is actively involved in training and proctoring urologists and prostate surgeons across the country and internationally. He is a widely regarded prostate surgeon, particularly for the success of his custom SMART Surgery; the Samadi Modified Advanced Robotic Technique yields exceptional prostate surgery results.

Children of Heaven (Bacheha-Ye aseman)

1997 **PG** 87 minutes

In this Oscar-nominated Iranian drama from filmmaker Majid Majidi, a young boy (Amir Farrokh Hashemian) accidentally loses his sister's (Bahare Seddiqi) shoes and must share his own sneakers with her in a sort of relay while each attends school at different times during the day. The boy ultimately enters a much-publicized foot race in hopes of placing third and taking home the prize: a new pair of sneakers.

Cast: Mohammad Amir Naji, Amir Farrokh Hashemian, Bahare Seddiqi, Nafise Jafar-Mohammadi, Fereshte Sarabandi, Kamal Mirkarimi, Behzad Rafi, Dariush Mokhtari, Mohammad-Hasan Hosseinian, Masume Dair

Director: Majid Majidi

Genres: Children & Family Movies, Dramas, Movies for ages 8 to 10, Movies for ages 11 to 12, Family Features, Middle Eastern Movies, Iranian Movies, Farsi-Language Movies

Hey, we're prostate, we do prediction!

Preoperative Nomogram for Prostate Cancer Recurrence

Instructions for Physician: Locate the patient's PSA on the **PSA** axis. Draw a line straight upwards to the **Points** axis to determine how many points towards recurrence the patient receives for his PSA. Repeat this process for the **Clinical Stage** and **Biopsy Gleason Sum** axes, each time drawing straight upward to the **Points** axis. Sum the points achieved for each predictor and locate this sum on the **Total Points** axis. Draw a line straight down to find the patient's probability of remaining recurrence free for 60 months assuming he does not die of another cause first.

Instruction to Patient: "Mr. X, if we had 100 men exactly like you, we would expect between <predicted percentage from nomogram - 10%> and <predicted percentage + 10%> to remain free of their disease at 5 years following radical prostatectomy, and recurrence after 5 years is very rare."

Men like you

To find "men like you", we first look through men in our database who we have followed for a long-time to see how they do. We then apply some special statistical analyses. These are the equivalent of identifying men who were a similar age to you when they were treated and who had similar other diseases (such as high blood pressure) and types of prostate cancer (e.g. they had the same Gleason grade as you and their PSA was close to yours). We then look amongst those men to see who answered the questionnaires in a similar way. How those men did over time can give us an idea of your expected progress over time.

Men like you: further information about our study methods

Further information about "men like you":

1. The database currently includes only men treated by surgery at Memorial Sloan-Kettering Cancer Center, although we are planning to expand to include patients treated at other hospitals.
2. The database includes men treated by open, robotic and laparoscopic radical prostatectomy. However, the type of surgery is not taken into account: for example, we don't get different predictions depending on the type of surgery you received.
3. For analyses of urinary and erectile problems, we only include patients treated since about 2000.
4. For analyses of cancer outcomes, we include patients treated many years ago, although we include a "weighting" factor so that patients treated more recently count more in the analysis.

Free of cancer

After surgery for prostate cancer, patients get a blood test to measure something called "PSA". If PSA starts to rise, this means that the cancer has returned. By "free of cancer", we mean that a man has not experienced a rising PSA.

Dry

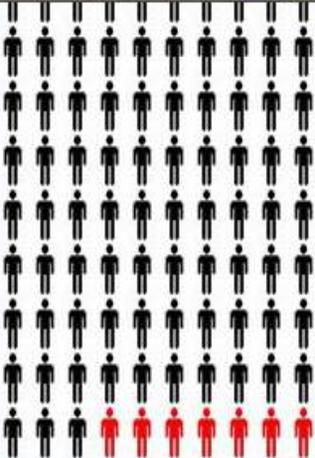

By "dry" we mean that a man does not need to use pads in normal daily life. Some men who don't need pads still sometimes have a little bit of leakage, or feelings that they have to rush to the bathroom.

Me Car

Able to have sex

The questionnaire that you took is called the "International Index of Erectile Function". Experts say that a score of 24 or higher is typical for a man with normal sexual function.

A score of 10 or less out of 30 on this scale is typical for a severe erection problems. Such men are only rarely able both to have erections sufficient for penetration and to maintain their erection to complete intercourse. However, some of these men respond to therapies such as penile injection therapy, urethral suppository, or a vacuum device.

Men who are expected to have a score of 24 or more, we define as "able to have sex most of the time they want to".

Men who are expected to have a score between 11 and 23, we define as "able to have sex some of the time they want to".

SAM: Self-Assessment and Management

Welcome to the "SAM" website for patients after prostate cancer. This web site is here to help you and your health care team keeps in touch about your recovery. You can also get information and advice. What do you want to do now?

- Take a survey
- What we know about you
- See how you have been doing over time
- See your test progress
- Get advice**
- Logout

Done Internet

Advice

- **Your responses to the survey indicate that you are having some difficulty with sexual function.**

Advice

- **To help you with any difficulty getting erections, talk to your urologist about therapies you can try, such as medication (like Viagra, Levitra, or Cialis). If you are already taking medication, talk to your doctor or nurse practitioner about other options, such as penile injection therapy, urethral suppository, or a vacuum device. Remember that it can take up to two years for the nerves that control erections, the cavernous nerves, to recover from the trauma of surgery.**

| 0 | 21 | 21 |
| 1 | 0 | 0 |
| 3 | 12 | 10 |
| 6 | 14 | 13 |
| 9 | 16 | 5 |
| 12 | 17 | - |

Click [here](#) to find out what we mean by "men like you".

Done Internet

Advice

- **Your responses to the survey suggest that your urinary function has been declining over time. In some cases, this may indicate a problem that can be treated. See your urologist or a voiding dysfunction specialist to help you with this problem.**

Advice

- **Remember to keep up with your kegel exercises daily.**
- **There are some other things that you can try to help deal with urinary problems. You can restrict the amount of fluid you drink. You can also limit or avoid caffeine. Caffeine can be very irritating to the bladder causing increase in leakage. You can use protective pads and empty your bladder before drinking alcohol, exercising, or engaging in any activity that would make it difficult to use the bathroom.**

Section 2: Your Medical History

There is no need to tell us about symptoms related to your cancer. If you are unsure about whether to tell us about something, mark it down. We will ask you more when you come in for your appointment.

Stroke

Have you ever had a stroke? Yes No

Asthma

Have you ever been diagnosed with asthma? Yes No

What severity of asthma describes your illness?

Mild = does not interfere with daily activities Moderate = some interference with daily activities Severe = major impact

Approximately how often do you use a rescue inhaler for your asthma?

I rarely use my rescue inhaler Less than once a week Once a week
 Multiple times per week Once a day Multiple times a day

Have you ever been admitted to the intensive care unit (ICU) or intubated (had a tube inserted in your throat) because of your asthma? Yes No

COPD

Do you suffer from "smoker's lung" or have been diagnosed with chronic obstructive pulmonary disease (COPD) or emphysema? Yes No

Musculoskeletal Pain

Have you ever had or been treated for persistent pain in your muscles or bones, such as low back pain or arthritis? Yes No

Previous

Next

Comorbidity

LIFE EXPECTANCY AND COMORBIDITIES

Probability that the patient will die of other causes: 24% within 10 years, 39% within 15 years

Patient is 60 years old and has the following comorbidities:

- Current Smoker

Patient does not have family history of prostate cancer.

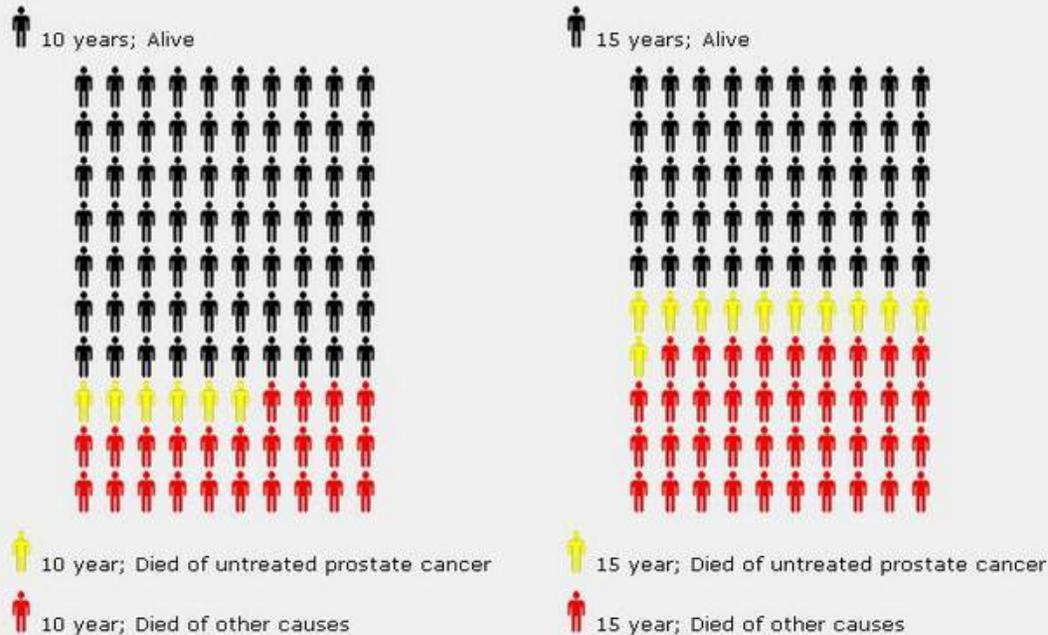

PROSTATE CANCER RISK

Probability that the patient will die of untreated prostate cancer if he does not die of other causes: 8% within 10 years, 16% within 15 years

- Age: 60
- PSA: 6
- Grade: 4+3
- T-Stage: T1C

Probability that the patient will die of prostate cancer, taking into account age and co-morbidity:
6% within 10 years, 11% within 15 years

Overall probability of death:
29% within 10 years, 50% within 15 years

4Kscore™ Test

FINAL REPORT

Patient Information

Name: John Doe
 Gender: M
 Chart No: 87485524
 DOB: 04/30/1938
 Accession #: FKS-000001
 Collected: 05/01/2014
 Received: 05/02/2014

Clinical & Specimen Information

Prior Biopsy: Yes
 Age: 76
 DRE: Neg.
 Received: Whole blood in K₂EDTA

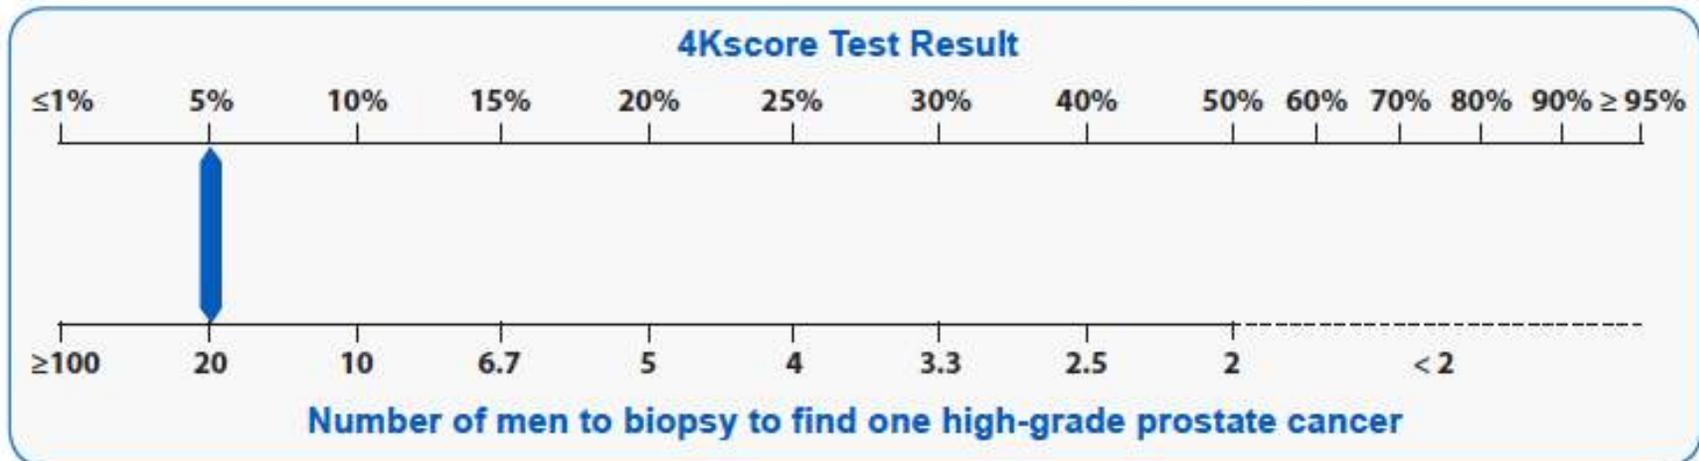

Total PSA and Free PSA Results

Total PSA: 6.23 (Reference Range 0.0 – 4.0 ng/mL)
 F/T PSA Ratio: 21% (Reference Range > 25%)

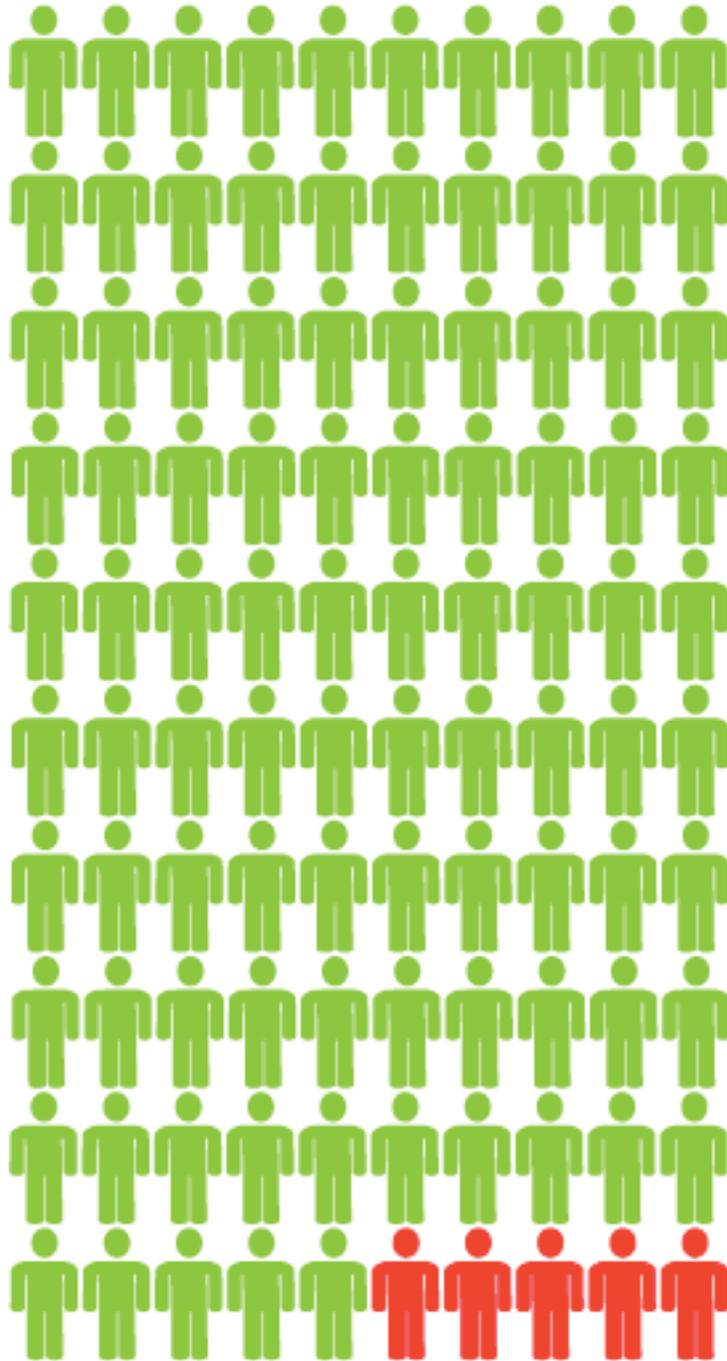

4Kscore Test Result & Interpretation

The patient's **4Kscore Test** result is **5%**

At a **4Kscore Test** result of 5%, about **1 in 20** men biopsied would have high-grade prostate cancer.

The 4Kscore Test result is a personal risk of a high-grade prostate cancer of Gleason score 7 or higher on prostate biopsy. Other clinical information along with the 4Kscore Test result should be considered in the discussion between the urologist and the patient in the process of making the most informed decision about undergoing biopsy.

=

**95% chance that
the biopsy does not
find a high-grade
prostate cancer.**

=

**5% chance that
the biopsy finds a
high-grade prostate
cancer.**
